

Excelle VI

SPRUNG FLOOR SYSTEM

for heavy use theatres

Excele VI sprung flooring systems are the result of rigorous field-tested research to address safety, performance, and reliability standards, and specially designed for permanent installations in multi-use professional heavy-use dance theatres and related performances. The ExceleVI system is an engineered bi-layer system featuring a base layer of premium grade 3/4" void-free, water-resistant, multi-veneered plywood with a top layer of 5.35mm tempered exterior grade hardboard. Using a unique PVC spline connection adds approximately 70% greater strength and elevation stability overall. Excele VI is quick and simple to install on your existing substrate and very quiet -with acoustic ratings for both ground and upper level applications. Pre-installed suspension pads are a unique blend of closed-cell sponge of varying durometer and synthetics that perfectly match the "flex" of the panel and assure years of trouble-free service. Excele VI is recommended for use with L'AIR Professional DanceVinylor hardwood as the performance surface.

FEATURES INCLUDE:

- 48" wide x 96" long
- Safe low profile of 1-9/16"
- Ergonomically designed for multi-use professional dance/entertainment facilities
